EDUCATION

Minerva University

*Bachelor of Science in Computer Science,
Concentration in Mathematics and Artificial Intelligence*

San Francisco, CA

Sep 2023 – May 2027

EXPERIENCE

Full Stack Web Developer

Jan 2025 – Present

Seoul Nooks

Seoul, South Korea

- Developing a dynamic booking interface using React, Tailwind CSS, and plugins (such as Flatpickr), with responsive design, real-time room availability, and lazy-loaded image galleries, improving page load times by 40%.
- Building a secure backend with Django, RESTful APIs, and PostgreSQL, handling 100+ daily bookings, coupon validation, personalized application forms and automated email confirmations, increasing form completion rates by 20%, reducing infrastructure costs by 80% compared to third-party services.

Web Developer

Sep 2024 - Dec 2024

LnData, Inc

Taipei, Taiwan

- Analyzed 5-years datasets from Easy Card, Taiwan's leading payment system, to build human behavioral model prediction aimed at reducing Scope 3 emissions
- Designed a web extension prototype for 100 corporate employees, providing actionable Scope 3 emissions insights directly within their company accounts

Admission Data Analyst

Aug 2024 - Present

Minerva University

San Francisco, CA

- Data filtering and labeling 500+ applications per cycle through scikit-learn for categorization, pandas for data manipulation and NumPy for efficient data handling
- Cut processing time by 20 % through Python-based automation and data visualization

User Experienced Researcher

Sep 2023 - April 2024

Gensler

San Francisco, CA

- Collaborated with Gensler through Minerva University to conduct SWOT analysis and market research involving 300 employees. Utilized AI models to develop machine-augmented architectural models aimed at enhancing employee mood through personalized artworks

Researcher

Jun 2021 - Jun 2023

VNU University of Economics and Business

Ha Noi, Vietnam

- Co-author of two research papers on sustainable business model innovation (BMI) of small and medium enterprises during COVID-19 using quantitative tools Stata and Python
- Supported Master's and PhD candidates with data analysis and papers editing to facilitate publication of their findings in national journals and international conference

PROJECTS

White-mirror | *Python, React, PostgreSQL, FastAPI, Tailwind CSS*

[Github](#)

- Built a React frontend that processes real-time messaging via WebSockets , integrating with 12+ FastAPI endpoints to deliver manipulation detection with 85% accuracy and sub-250ms response time, while leveraging TailwindCSS and React Query for optimized API state management.
- Created a chat bot that queries API endpoints to generate dynamic visualizations with D3.js and Chart.js, transforming complex ML analysis into 8+ customized chart components that improved user comprehension by 65% while supporting 15+ analytical commands for manipulation pattern detection across conversation contexts.

Remote Classifier | *Python, React, Tailwind CSS*

[Devpost](#)

- Created front-end layout and functionality for image classification website using MindDB's AI model, optimized with Reflex Python UI library.

TECHNICAL SKILLS

Languages: Python, SQL (Postgres/MySQL), JavaScript, HTML/CSS, R and LaTeX

Frameworks: React, Node.js, Django, FastAPI

Developer Tools: Git, Docker, Google Cloud Platform, VS Code, Figma, Tableau, Stata, Google Analytics
